## IN THE CLAIMS

Please amend the claims to read as follows:

- 1. (Currently Amended) A method for tokenless authorization of an electronic scrip transaction using at least one scrip supporter biometric sample and an electronic identicator, sample, said method comprising the steps of:
- a. a scrip supporter registration step, wherein a scrip supporter registers with an electronic identicator at least one registration biometric sample,
- b.— an electronic scrip transaction proposed step comprising an electronic scrip denator account data, in which the scrip is drawn from a set including: electronic gift certificates, stored-value units; electronic coupons having a pro-determined dollar value, minutes of telephone calling time, miles towards earning a free airplane flight, and points towards receiving a commodity or service;
- ea. at least one transmittal step, wherein receiving a scrip supporter bid biometric sample is obtained from the scrip supporter's person and is electronically transmitted to the electronic identicator, and scrip donator identification information;
- db. a scrip supporter identification step, wherein the electronic identicator compares comparing the scrip supporter bid biometric sample with at least one registration biometric sample for producing either a successful or failed identification of the scrip supporter; sample received from a scrip supporter;
- c. upon successful comparison, settling a scrip transaction by debiting an account of a scrip donator identified by the scrip donator identification information and crediting an account of a scrip beneficiary;

wherein upon successful identification of the scrip supporter, a scrip transaction is biometrically authorized, the method occurs without the a scrip supporter presenting any smartcards or magnetic swipe cards, cards at a transaction point.

- 2. (Currently Amended) The method of Claim claim 1-further comprising at least one local identicator-containing a subset of all of the registered scrip supporter biometric samples in the electronic identicator, wherein receiving a scrip supporter bid biometric sample includes receiving a personal identification code.
  - 3. (Canceled)

- 4. (Currently Amended) The method of claim 3, 2, wherein the rule module further comprises at least one pattern data that is associated with at least one execution command, the personal identification code can be associated with a plurality of registration biometric samples received from a plurality of scrip supporters.
  - 5. (Canceled)
- 6. (Currently Amended) The method of claim 4, wherein the execution command comprises instructions for accessing at least one electronic registry, the instructions drawn from a set including: at least one serip donator account and at least one serip beneficiary account, comparing the scrip supporter bid biometric sample with the at least one registration biometric sample includes comparing the scrip support bid biometric sample against registered biometric samples associated with the personal identification code until a successful comparison is found.
- 7. (Currently Amended) The method of claim 6, 1, wherein the electronic registry is located on a computer that is external to the authorization system, scrip donator identification information includes a hardware identification code associated with a party data apparatus owned by the scrip donator.
